

Automatic Punching Machine

This machine is new type of automatic punching machine developed and manufactured by our factory. It is suitable for punching paper of various thickness. Step by step mechanism is used for in the paper feeding part, which can adjust the speed and thickness of paper feeding and conveniently and quickly. Combining with the action matching of the mechanical cam structure, the paper feeding positioning and punching can be realized. In the paper feeding part, a mechanical needle type paper spitting mechanism is added to realize that the thickness of the paper can be assessed, and all kinds of mechanical actions are set in the order, with high efficiency. Mould replacement and disassembly is simple and fast. The paper collection part is divided into three sections. A, B and C. type A is paper lifting and paper collecting. Type B is paper collecting with conveyor belt, and Type C is single fold paper collecting, which can meet different production needs. Type A lifting and paper collecting car needs to be replaced. Type B machine can realize continuous production without stopping the machine. All kinds of high efficiency parts adopt imported electrical parts to ensure the efficient and long-term use of equipment.

Machine Size	2580*1200*1200 (mm) BC +1200mm
Power Supply	AC380V
Power	2.2KW
Net Weight	1300KG
Diameter	A3, A4, A5, 0.5-4mm
Speed	100-130
